One-dimensional metal-oxide nanostructures: Recent developments in synthesis, characteristics and applications

April 1-April 10, 2019

Discipline of Metallurgy Engineering and Materials Science,
Indian Institute of Technology Indore- 453552. INDIA.

Overview:

The objective of this course is to provide an introduction to, and overview of, the physics of the 1D metal-oxide nanostructures. It should be suitable for undergraduate physicists and engineers who are interested in this application of semiconductor physics, and to non-specialist graduates and others who require a background in the physical principles of the 1D metal-oxide nanostructures. The focus is on the basic semiconductor physics relevant to the 1D metal-oxide nanostructures, and how these relate to the design and function of practical devices.
